DISCUSSION:

The sample was prepared in duplicate with one replicate spiked for quality control. Analysis is conducted by HPLC using tandem PDA and MSn detection. The PDA traces are examined for peaks giving spectra indicative of known PDE-5 inhibitors. MSn scans are reviewed for the presence of [M+H] ions matching those of known PDE-5 inhibitors. None of the PDE-5 inhibitors listed above were detected in the sample.

CONCLUSION:

None of the PDE-5 inhibitors listed above were detected in the sample.
